PROFESSIONAL SUMMARY

Full-Stack Developer skilled in the MERN and Next.js ecosystem, with two live applications featuring real payment integration and secure multi-provider authentication (OAuth, JWT). Proficient in RESTful API design, MongoDB, and shipping via CI/CD, with hands-on experience debugging session management and App Router issues.

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript
Front-End: HTML5, CSS3, React.js, Redux, Next.js, Tailwind CSS
Back-End: Node.js, Express.js, RESTful APIs, OAuth/JWT Authentication, Payment Integration
Database: MongoDB, Mongoose ODM, MySQL
Tools & Platforms: Git, GitHub (Version Control), npm, VS Code, Postman (API Testing), Vercel, Docker

EXPERIENCE

Web Development Intern, SkillCraft Technology July 2025 – August 2025

Remote | skillcrafttech.com

- Developed 3 projects from scratch in vanilla JavaScript (ES6+), HTML5 and CSS3: a stopwatch driven by user events, a quiz app that scores answers in real time, and a responsive landing page that adapts to different screen sizes.
- Wrote modular, reusable functions using event-driven DOM manipulation and state management for the stopwatch timer and quiz real-time scoring, with localStorage persistence.
- Styled the landing page with CSS Grid, Flexbox and media queries; debugged DOM state edge cases and timing bugs without framework abstractions, now applied to React state logic and Next.js App Router session handling.

PROJECTS

Travel-Log, Travel Journal & Discovery Platform

(Next.js, NextAuth, MongoDB, Cloudinary, REST APIs) | Live Demo | GitHub Repo

- Architected a full-stack, responsive travel journaling platform for publishing geotagged travel logs with cover photos, hidden gems, and tips, with discovery via an interactive Mapbox map, search, and category filters, scoring **90+** on Lighthouse.
- Implemented NextAuth OAuth 2.0 (GitHub/Google) with automatic user provisioning; integrated Cloudinary for direct browser-to-cloud image uploads and built REST API routes, verified via Postman.
- Designed a MongoDB indexing strategy using a createdAt index and Mongoose .lean() that cut API response time by **41% (887ms → 527ms)**, eliminating collection scans across **8,000+ records**; shipped via Vercel CI/CD with SSR for SEO-friendly URLs.

GetMeACoffee, Creator Funding Platform

(Next.js, NextAuth, MongoDB, Razorpay, Server Actions) | Live Demo | GitHub Repo

- Built a full-stack creator monetization platform with personalized /username pages (responsive Tailwind dark-theme UI, Lighthouse **90+**) and real-time Razorpay payments, backed by a MongoDB schema for users, profiles, and transactions.
- Engineered server-side Razorpay webhook signature verification to block spoofed/replayed payments, plus collision-safe username generation and a live top-10 supporters leaderboard with names/messages.
- Optimized profile lookups with compound MongoDB indexing, cutting lookup time by **81% (27ms → 5ms)** across **5,000+ records**; tested full payment flow across 10+ Razorpay sandbox transactions and deployed via Vercel CI/CD.

EDUCATION

Greater Noida Institute of Technology (GGSIPU) Sept 2022 - June 2026 | Greater Noida, India
Bachelor of Technology in Computer Science Engineering CGPA: 7.88 / 10.0

ACHIEVEMENTS

- Solved **200+ algorithmic problems** in Java across LeetCode, GeeksforGeeks and takeUforward, strengthening core data structures and problem-solving skills.
- First-authored a paper, "CampusConnect: A Centralized Web Platform for Discovering Student Opportunities," International Journal of Computer Science Languages (IJCSL), Vol. 4, Issue 2, 2026, ISSN: 3048-944X.
- Secured a **Top 40** rank at HackWithDelhi (2024); advanced to the online round of Code Veda 2025, competing among **6,000+ participants**; also competed in Smart India Hackathon and Troubleshoot Ideathon 2025.
